## Technical Overview

Our technical overview on the NEPSE,

NEPSE index has been in a sideways market since June 2022 till date March 2024. Fluctuating between the 2200s and the 1800s. Any movement inside these 2 range is can be considered a noise until the index actually goes beyond these range.

## Weekly analysis

Figure 6 Weekly Time Frame Candlestick Pattern

A larger red candle was observed for this week, paired with a rising volume for this current week. Technically, we could see the downtrend continuing, as rise in a volume suggests the trend to continue. The EMAs and index are still close to each other denoting the market still being in sideways.

## Daily analysis

After the rejection from the minor resistance 2100 the market has been in a slow, fall downward. As the index breached the parallel channel towards upward, we can still get the idea of a downfall from the market. However the candles are less volatile as the fall has continued. Which is an indicator of the downtrend almost to an end. Hope fully we could see the market bounce back from our support areas in the near future.

Here are some of the zones to watch to determine the direction of the market.

Support	Resistance
S1 – 1980	R1 – 2035 - 2040
S2 – 1940	R2 – 2080
S3 – 1860	R3 – 2120
